Supervisor: Mona Alofy

October 24, 2024

Content Table

Abstract

In this document we present an overview of **Alify** pet care application .The document Introduces the analysis phase, explaining the purpose of developing **Alify** and highlighting its strengths over other similar competing applications .Next, the multiple functions and services provided by **Alify** to enhance the user experience raising pets . Next, the application design phase including **Alify** system architecture to show the constituent components and their relationships , and providing UML models to enhance illustrating the application .Next, it provide User Interfaces to ensure users have a comprehensive idea about **Alify** .Finally conclude with predictive technical specifications essential to run the application.

Key Terms

Client-Server Model, Pet Profile, Veterinarian ,UI

1. Introduction

Lots of applications are developed daily. But not every application serves its users properly. Only useful application are needed by users. Useful applications are characterized by their ability to solve daily problems faced by several people and make their life easier. From this standpoint our team focused on developing an application (Alify)that solves a common problem faced by many people.

2. Analysis

This section talks about a general analysis of the application including the purpose of developing and creating it, the problems that the application is meant to solve, and the proposed audience that uses the application. In addition to the necessary requirements must exist, and a comparison between Alify and other similar applications.

2.1 Application Purpose

Alify application is made to ease the life of pet owners, which helps them take care and raise their pets properly by giving appropriate information about their lifestyle.
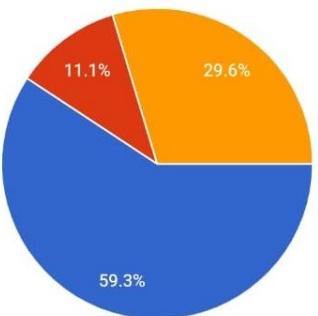

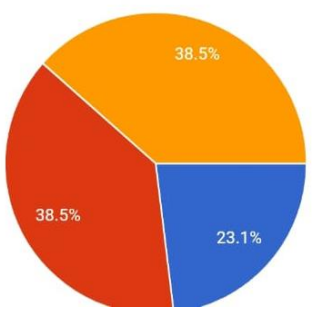

2.2 Problem Definition

Contributes to solve the problems faced by pet lovers raising pets and provides them sufficient expertise and knowledge to care of them, especially in areas lacking veterinary centers.

2.3 proposed Audience

Alify is made for pet owners , people interested in pets in general and for the contributed vets.
2.4   Application Requirements

A study was conducted to determine the basic requirements needed to be in the application-see in **Table 1** bellow for study results-. So it includes a set of functional and non functional requirements that make it achieve the purpose it was created for.

Study results	Description
نسخ الرسم البياني هل سبق لك وأن اعتنيت بحيوان أليف من قبل؟ 27 ردًا نعم لي خبرة سابقة في تربية الحيوانات الأليفة أتعامل معهم عند أصدقائي ومعارفي فقط لا لم يسبق لي التعامل مع اي حيوان اليف من قبل 11.1% 29.6% 59.3%	The results show that 59.3% of respondents have previous experience in pet care. Meanwhile, 29.6% interact with pets only at friends' places, and 11.1% have never dealt with pets. This suggests a diverse audience with varying levels of pet care knowledge and needs
نسخ الرسم البياني ان كنت من مربي الحيوانات الأليفة، هل وجدت صعوبة في الاعتناء بهم ؟ 26 ردًا لا أنا لدي خبرة كافية لتربية الحيوانات الأليفة ربنا واجهت بعض المشاكل عند مرض حيواناتي نعم واجهت صعوبة بالغة عند الاعتناء بهم 38.5% 38.5% 23.1%	The results show that most respondents 38.5% find pet care challenging, especially when pets get sick. Only 23.1% feel confident in their experience, highlighting the need for more support and resources for pet owners.

هل يوجد في منطقتك عيادة بيطرية يمكنك اللجوء إليها عند مرض حيوانك الأليف؟

27 ردا

نعم يتوفر الكثير من العيادات البيطرية القريبة مني
يتوفر البعض ولكن أحتاج وقتا طويلا للوصول لهم
لا، لايوجد أي عيادة بيطرية بالقرب مني
37%
33.3%
29.6%

The results show a mixed availability of veterinary clinics in the respondents' areas. Only 29.6% report having many nearby clinics, while 33.3% have none close by, and 37% say some clinics exist but are hard to reach. This suggests varying access to veterinary care among pet owners.

هل تواجه صعوبة في تحديد كميات الطعام و تذكر مواعيدها المناسبة لحيوانك؟

27 ردا

نعم يصعب علي ذلك
ربما لا اعرف الكميات المناسبة لنوع حيواني
لا، يسهل علي تقدير كمية الطعام المناسبة وتحديد اوقاتها

37%
40.7%
22.2%

The results revealed that many pet owners struggle with feeding schedules and quantities. About 40.7% are unsure about the right amounts, 22.2% find it difficult to determine and remember feeding times, while 37% have no issues. This highlights a need for better guidance to ensure pets' dietary needs are met.
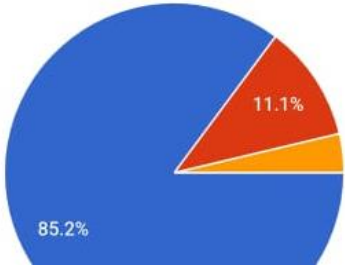

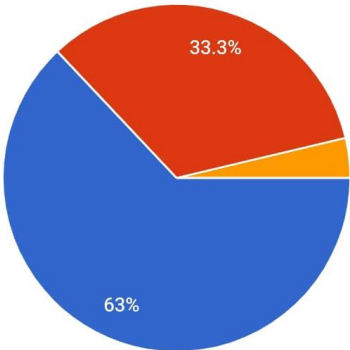

اذا مرض حيواني الأليف أقوم ب:

27 ردا

الذهاب للعيادة البيطرية فورا
اسأل من له خبره في تربية الحيوانات الأليفة
لا أفعل شيئا وانتظر شفاءه

40.7%
7.4%
51.9%

The results show that 51.9%of respondents go to the veterinary clinic immediately when their pet gets sick, while 40.7% ask someone with pet-raising experience, and 7.4% do nothing and wait for the pet to recover." This reflects the varied approaches pet owners take when dealing with illnesses

هل تحب أن يكون هناك تطبيق يزودك بمعلومات حول تربية حيوانك الأليف ؟ 27 ردًا نعم افضل أن اعرف اكثر عن كيفية العناية بحيواني ● اعتقد انها فكرة غير مجدية حيث المعلومات متوفرة في جوجل وغيره من المنصات ● لا داعي فتربية الحيوانات الأليفة غاية في السهولة ● 11.1% 85.2%	The results show that 85.2% of respondents prefer having an app that provides information on pet care, 11.1% think it is not very useful currently, and 3.7% believe there is no need for such an app given the abundance of information available online." This highlights a strong desire among most respondents for additional resources to care for their pets
هل تحب أن يقدم التطبيق خدمة التواصل مع طبيب بيطري؟ 27 ردًا نعم أفضل ذلك فأنا لا استطيع الذهاب للعيادة البيطرية ● ربما تكون فكرة جيدة ● لا، لا افضل التحدث مع طبيب عن بعد ● 33.3% 63%	The results show that , 63% of respondents prefer a remote veterinary communication service because they cannot go to a veterinary clinic, 33.3% think it might be a good idea, and 3.7% do not prefer it. This indicates a strong interest in remote vet services among users.

Table 1, study results for Alify requirements

2.4.1 Functional Requirements

These are services the application should provide based on user needs ,which specify the different actions taken by the application to make users interact with . Including:

- The application should allow the creation of a new account for each user containing his or her personal information: name, email, and password.

- The application should allow users to search for the type of pet and information related to the specific pet.

- The application should allow information about the animals to be provided.

- The application should allow the creation of sub-accounts for each pet the user owns, including detailed pet data.

- The application should allow a special interface to be provided to the administrator.

- The application should allow users to create reminders for various pet care activities.

- The application should allow a communication with veterinarians.

2.4.2 Non Functional Requirements

These are the functions that have to be in the application by default to ease the process of using the application and give users a seamless experience. Including :

- The application should be compatible with android and iOS operating systems.

- The application should make noise when sending notification.

- The application should work on the internet.

- The application information should be edited only by the admin.

- The application should respond quickly (5 sec max).

These requirements ensure the application works consistently and ensure a great user experience.

2.4.3 Requirements refining

In addition to previous requirements and to make sure being in touch with user real needs, a survey was conducted to gather other requirements users want to be in the application-see the conducted survey on **p 20** -. and based on the responses - see in **figure 1** below for responses - requirements were refined to include the following:

يقدم استشارات بيطرية فورية + معلومات للأمراض الأكثر شيوعًا حفاظًا على وقت المستخدم + وجود تنبيهات تذكيرية لمواعيد الطعام بكمياته المناسبة

رد واحد

اذا تعبان يجون ياخذونه هم ويعالجوه ويرجعونه وقت اكون مشغوله ويحون في ضمان لسلامته وكذا

رد واحد

مستلزمات

اقتراحات للطعام

رد واحد

نعم ، يجب ان يتوفر ف التطبيق مختص بالحيوان والتواصل معاه اونلاين

يوجد في التطبيق عيادة بيطرية متنقلة

يكون فيه زي مجتمعات لكل نوع حيوان أليف (سلحفاة، هامستر، قطه) اتناقش فيها مع مربيين حيوانات مثلي عشان ابدأ افهم طبيعيه الحيوان لان مرات هامستراتي تسوي تصرفات غريبه ما اعرف كيف ابحث عنها بعكس لو ناقشت أشخاص عندهم نفس حيواني.

ايه ممكن اضافه متجر لشراء الطعام مثلا

.

figure 1, Responses to the conducted survey.

- Adding an online store to buy various pet cosmetics.

- Adding a chat group for people who own the same pet.

- Providing information about the most common pet diseases.

- Linking the application to comprehensive pet clinics.

- Set notifications for sending funny information about pets

2.5   Pet Care Applications Comparison

After refining the functional and non-functional requirements of Alify application, and incorporating valuable feedback from the conducted user survey, it is important to contextualize these features within the existing landscape of similar applications. By comparing Alify with other pet care applications , we can better understand the unique strengths in Alify design.

2.5.1 Watch Pet

Watch Pet is a pet care application that Focuses on providing a virtual pet care experience and used by people who enjoy raising virtual pets on their smartphones. Providing a fun interactive experience related to caring for a virtual pet.

2.5.2 Advantages and Disadvantages of Watch Pet Application

The following **table 2** shows the main advantages and disadvantages of Watch pet Application.

Advantages	Disadvantages
It allows users to have an entertaining interactive experience of caring, feeding and playing with pets.	May not provide a deep realistic experience.
Those who cannot have pets and would like to have one can get a virtual one.	Requires constant interaction with the pet via the screen, which affects the user's health.
It offers fun challenges of caring a pet and keeping it healthy and happy.	It is fun, but does not provide many benefits about raising a pet in real life.

Table 2, Wach Pet advantages & disadvantages

Alify addresses these disadvantages by aiming to provide assistance in raising real pets, and offering the user all essential information including practical tips and solutions on how to take care of pets. Ensuring a more interactive and enjoyable experience for pet owners.

3. Design

This section includes the developed design of Alify. This is an important step in translating the functional requirements into a well structured architecture . Alify is designed to adopt the client-server methodology since it has users (clients) interacting with a central server , and will consist of multiple components interacting with each other to provide a smooth experience for pet owners and vets. In this phase our team focuses on establishing the overall system architecture ,data models and technical specifications.

3.1   System Architecture

System Architecture refers to high level of the application .It defines the components and how they interact with each other to form the entire system. And the building blocks (components) in Alify application are:

- **User Interface(UI):** The front end where users (pet owner and vets) interact with the application. This includes screens for log in ,pet information , search, reminders and chat .

- **Admin Interface:** A special interface for admins to make them able to monitor and manage the application data ,like (user profiles , pet information ,..etc).

- **Application Server:** The back end components that processes and deals with user requests, like (searching for pets, creating reminders,..etc.). It will handle business logic and communicate to database.

- **Database:** where all the application data (including user, vet, admin and pet information, vet chat content ,. . . etc) stored and retrieved.
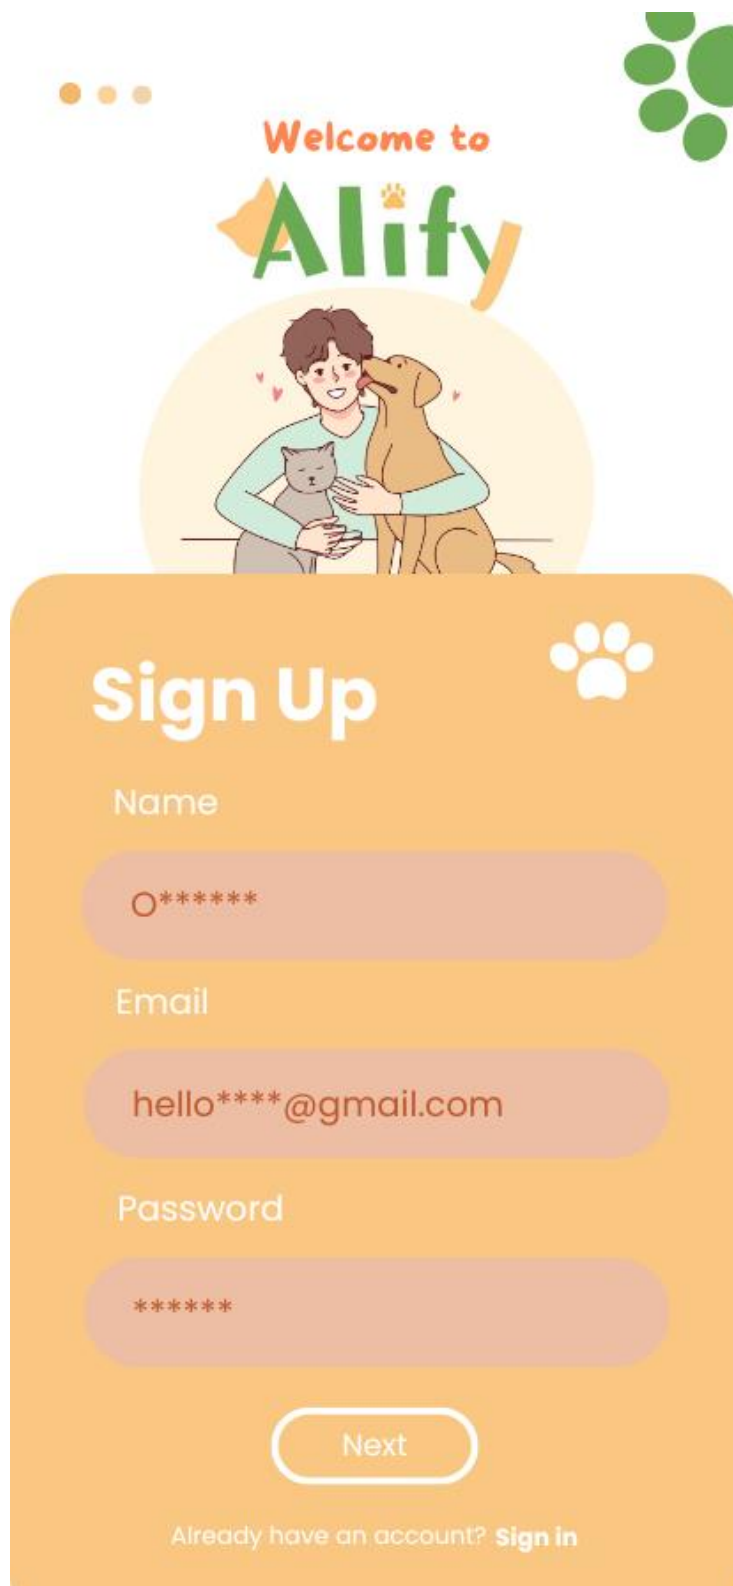

Now that the components are defined, the interactions between them can be grouped in:

- **User Interactions with UI:** Different users will use UI in different manners to meet their needs ,like (pet owners will log in ,search and create reminders, vets will chat with different pet owners and admins will manage the whole information in the application).

- **UI Communications with The Application Server:** It is whenever the users performs an action ,the UI sends the request to the server .

- **Mutual Chatting:** The chat functionality between pet owners and vets can be real-time (WebSocket) or message-based (stored in a database).

- **Application Server Interactions with Database:** The server stores or retrieves the data from Database .

High security , communication protocol types and data management have to be considered To achieve the best architecture .

3.2 UI Prototype

Prototypes are an optimal way to present a high abstracted view of systems . our team considered the importance of it, and some User Interfaces were deigned to show how the application looks like-see in next **figures 2,3,4** below.

Figure 2, Sign up interface allows users to create new accounts.
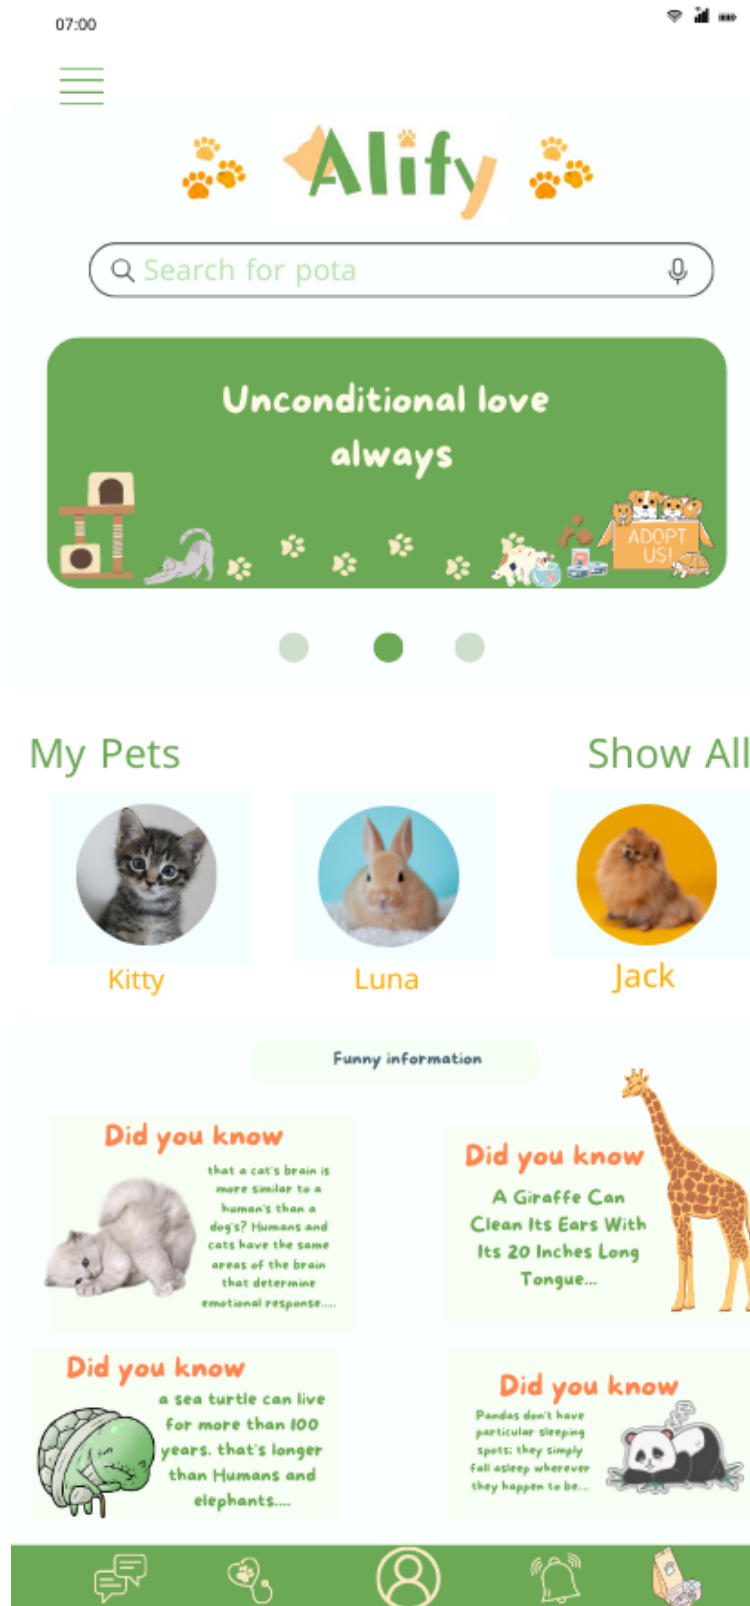

Figure 3, Home interface shows pet information.

Figure 4, pet account interface shows information for each owned pet.

3.3   Data Models

Now that the basic components of the system and how they interact with each other are defined , a set of models -that explain how Alify works- will be illustrated.

3.3.1 Use Case Diagram for Alify Application

Here an overview of the interactions between different users (customer, app administrator, and veterinarian) is provided. Beside the different functions they can perform within the application. These functions include : Account registration, pet search, pet data management, creating reminders, communicating with veterinarians, and more shown in **figure 5** below.
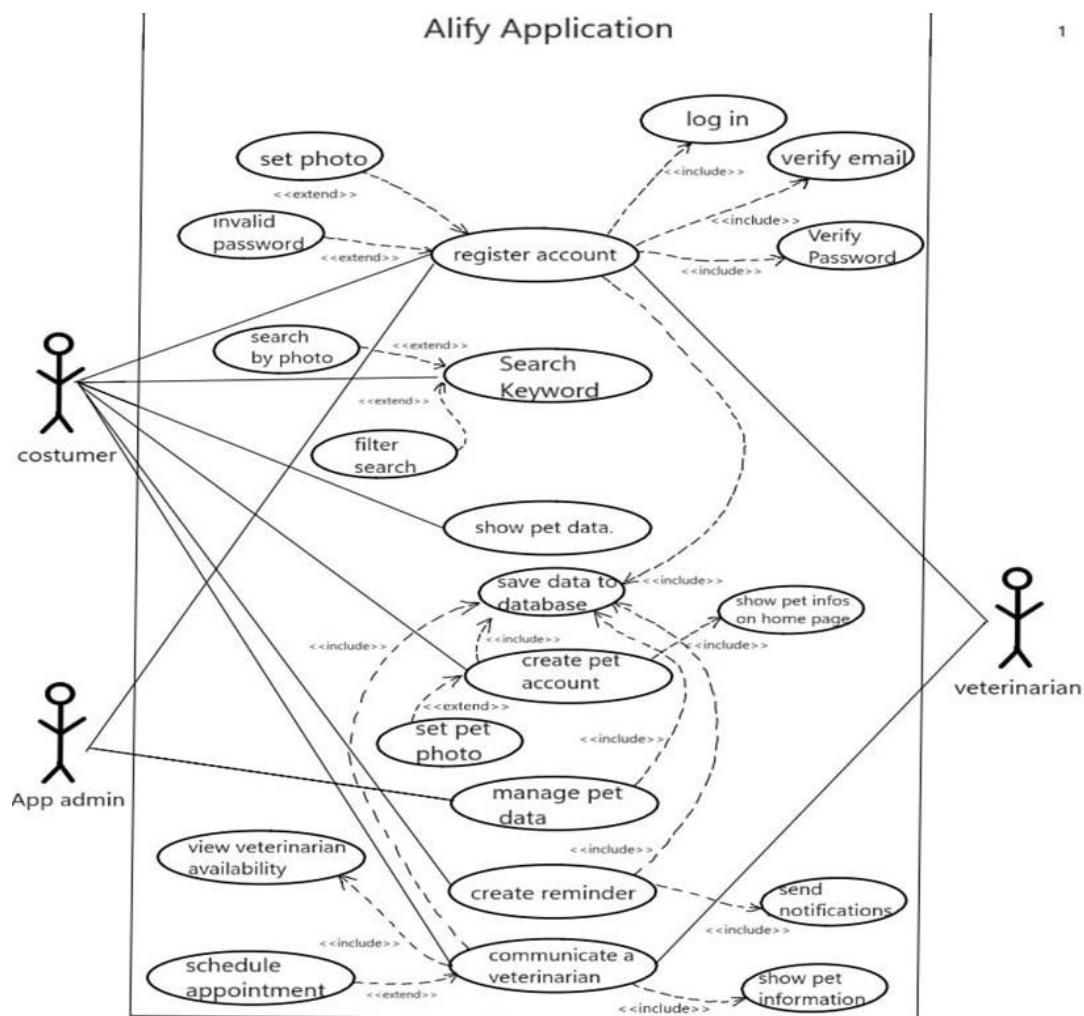

Figure 5, Alify use case shows the main functions performed by Alify.

15

3.3.2 Class Diagram for Alify Application

Class Diagram is used to show the integrated components consisting the application and their relationships as follows:

- **App User:** This class manages user account functions like registration and log in.

- **Customer:** Controls creation, update and deletion of pet data. So pet owners can create ,modify, and remove pet profiles.

- **Pet Account:** Contains details of pet accounts and linked to the its owner's profile for easy access and management.

- **Pet Data:** Manages the pet shown information such as gender and Preferences.

- **Veterinarian:** Manages medical history and appointments by viewing and modifying medical records and schedules.

- **Admin:** Manages pet data in general ,he has the access to all parts of the system.

- **Database:** manages connecting, disconnecting and data backup.

- **Search:** Searches data and photos of pets.

- **Reminder:** Creates, edits and deletes reminders for each pet.

- **Appointment:** Manages and schedules appointments between vets and pet owners.

-See the structured class diagram in **figure 6** below-
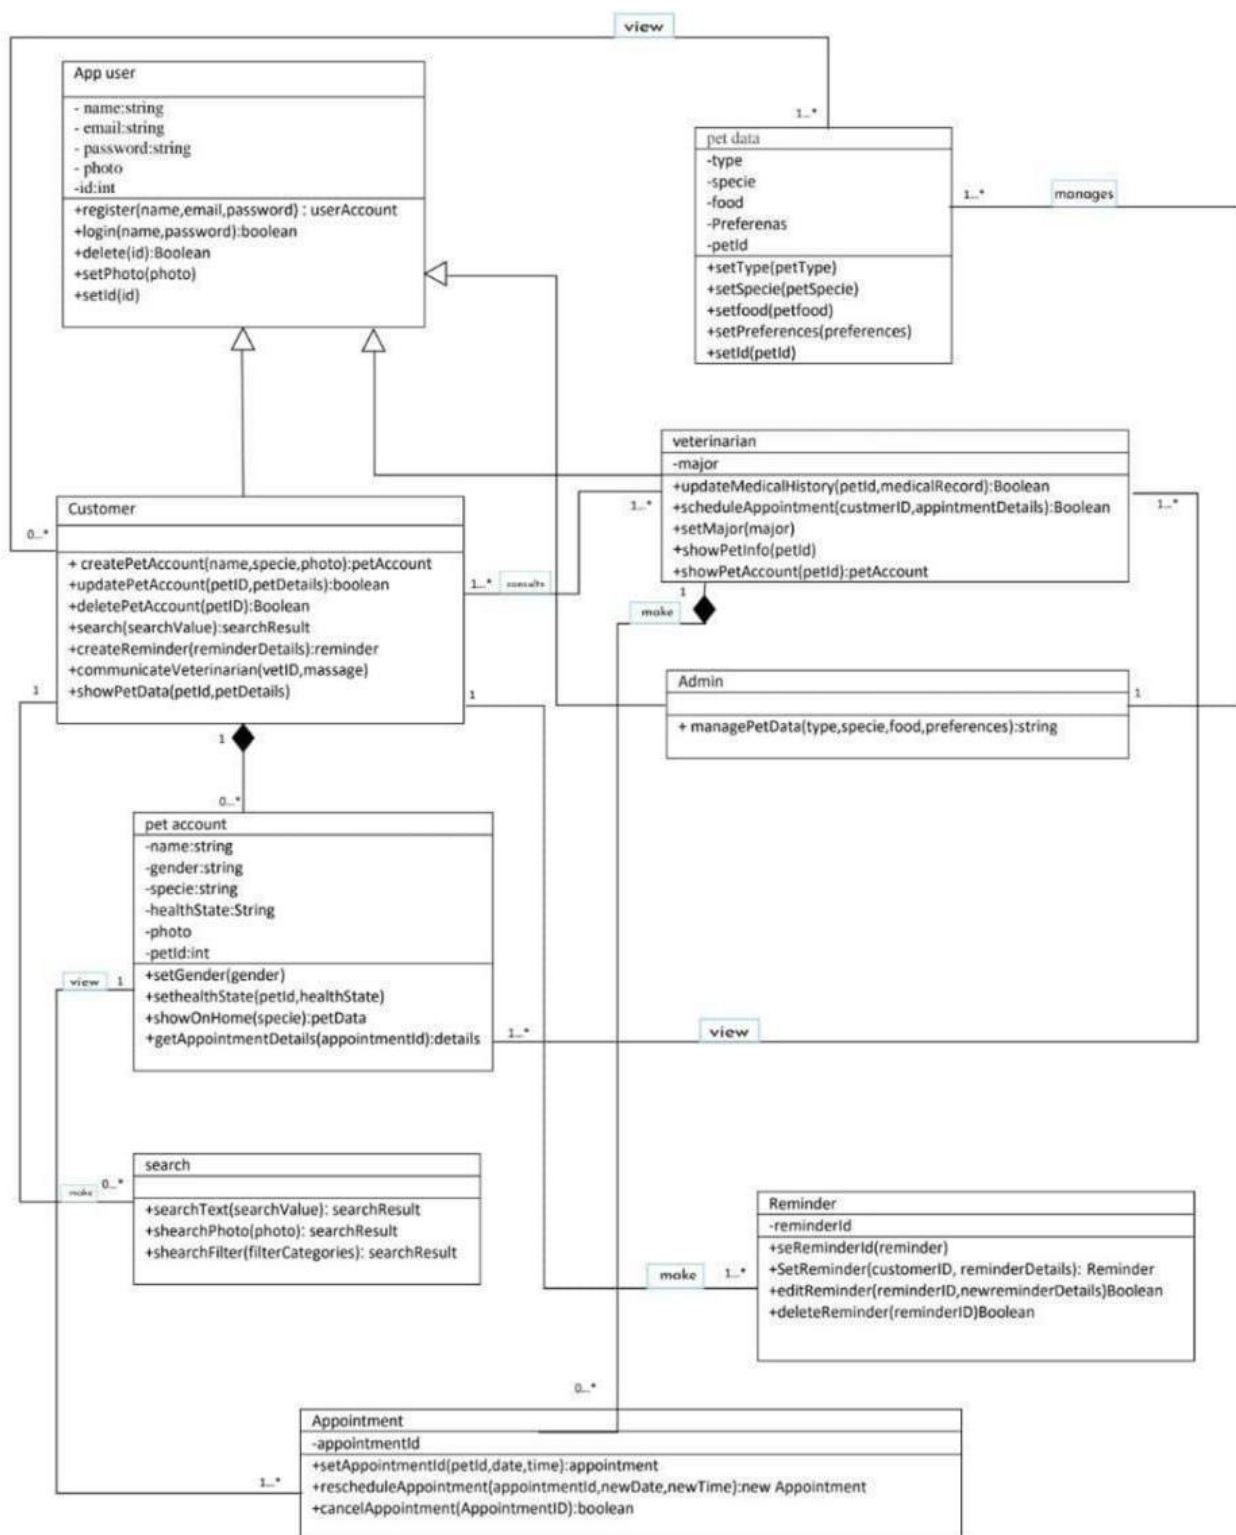

Figure 6, Alify class diagram shows the application components.

3.4 System Technical Specifications

The technical specifications of Alify application outline the key technologies, tools and configurations required for the successful development and deployment of the system. These specifications ensure that the application meets the functional requirements and operates in a professional manner. This section covers the necessary hardware, software, and network requirements, as well as scalability options.

- **Hardware requirements** Including: 1.5 GHz or higher processor, minimum 8 GB RAM and 100-200 MB for Disk Space.

- **Software requirements** Including: Windows 10 operating system or later version, Java or C programming language and MySQL for relational Database.

- **Network and communication** Including: TCP/IP communication protocols for reliable communication, HTTPS for secure communication and SSL/TLS for encrypting transferred data to maintain security.

- **Scalability** Including: Adding more servers to distribute the load and Uses indexing to handle growing data volume.

The detailed hardware, software, and network specifications outlined in this section ensure that Alify is built on a solid foundation capable of delivering optimal performance and reliability.

4. Conclusion

In conclusion, Alify represents a comprehensive solution for pet owners and veterinarians, by offering features that ease pet care, enhance communication between users, and provide a user-friendly experience. From gathering and refining functional requirements to designing a robust reliable system architecture and user interfaces, the development of Alify has been designed with a focus on practicality, user satisfaction, and scalability. By addressing gaps in existing applications, Alify stands out as a valuable tool that simplifies the responsibilities of pet ownership while ensuring pets receive the care they need. Moving forward, this foundation sets the stage for future iterations and improvements, keeping the needs of both pets and their owners at the heart of its evolution.

5. Future Work

Adding future work helps maintaining the quality and reusability of the application, taking into account staying updated. That is why our team considers the importance of future work by adding Artificial Intelligence(AI) services to improve the user experience. Via providing suggestions about pets information, sending notifications based on user preferences, and reminding users of their pets activities.
